**GOVERNMENT OF EAST PAKISTAN
DIRECTORATE OF AGRICULTURE**

Dated Dacca, the 16th August, 1960.

The Final Estimate of Tobacco Crop of East Pakistan for the year 1959-60.

Note—Tobacco is grown more or less in all the districts of East Pakistan but it is extensively cultivated in the district of Rangpur. This crop is generally planted from October to December. The present estimate covers the period from October 1959 to the end of July 1960 and deals with revised estimate of acreage and production.]

Character of the Season—The weather condition was not favourable at the time of sowing due to heavy showers in October and November. As a result the transplantation begun a bit late this year. The subsequent weather up to the harvesting time also was not at all favourable for the growth and maturity of the crop due to constant drought throughout the Province.

Acreage—The total area under tobacco crop in East Pakistan is estimated at 110,100 acres this year as against 110,700 acres of last year.

Average Outturn—The average outturn of the crop for the Province as a whole is estimated at 48 per cent. of the normal this year as against 73 per cent. of the normal shown in the final estimate of last year.

Total yield—On the basis of 48 per cent. as the average Provincial outturn and 14 maunds as the normal rate of yield per acre, the total yield of the crop for the Province works out to 27,200 tons this year as against 41,600 tons of last year. The decrease in yield is due to unfavourable weather condition at sowing time and subsequent constant drought up to the harvesting time.

A. R. CHAUDHRY,
Director of Agriculture, East Pakistan.
