### The Estimate of Linseed of East Pakistan for 1968-69.

**Condition of weather**—Excepting Kishoreganj, Faridpur, Comilla, Pabna and Khulna districts, the condition of weather for the cultivation and growth of the crop was more or less favourable in the Province. Significant damage due to drought has been reported from Faridpur.

**Area**—The total area under Linseed in East Pakistan for 1968-69 has been estimated at 36,155 acres as against 36,380 acres of 1967-68. The decrease in area is ascribed to increased cultivation of other more profitable crops like Boro, Wheat. Rape and Mustard, etc. The area has decreased in the districts of Dacca, Kishoreganj, Chittagong, Noakhali, Comilla, Dinajpur, Pabna, Jessore and Kushtia. The fall in area has been mainly in the districts of Comilla due to adverse weather and more cultivation of other Rabi crops, Kushtia due to increased cultivation of other oil seeds, Pabna due to increased cultivation of Wheat and Kishoreganj owing to heavy cultivation of Boro.

**Yield rate**—The average yield per acre of the crop for the Province stands at 5·32 maunds this year as against 5·21 maunds of last year. The increase in average yield rate is attributed primarily to favourable weather in most of the districts. The rise in average yield rate has been shared by Chittagong and Khulna Divisions. The fall in the average yield rate of Dacca Division is due to Faridpur where the yield fell due to drought. In Rajshahi Division it is due to Pabna where the yield declined owing to unfavourable weather.

**Production**—The total production of Linseed in East Pakistan for the current year has been placed at 7.060 tons, against 6,965 tons of the previous year. Rise in average yield rate has resulted in the rise in the total production.

The Districtwise acreages, yield rates and productions are given in the Appendix attached herewith.
